BIOBUZZ DRIVER CARD

Team 37102 · REV gamepad · BioBuzz TeleOp

✅ BEFORE THE MATCH

1. Gamepad on: **OPTIONS** + ✕
2. AUTO: pick **AUTO RED** or **AUTO BLUE**
3. 4 balls, **one per pocket**
4. TeleOp → INIT → read **Alliance** line. Wrong? ○ = **RED** ✕ = **BLUE** **Drive: robot-centric** (L1 = field-centric) · don't move the robot in INIT 📝 **Diagnostics log: ON** (SHARE in INIT switches it)
5. Battery ≥ **12.5 V**

🎯 HOW WE SCORE (every time)

1 🚗
DRIVE CLOSE
launcher toward our goal
tap △ to spin up

2 🔥
HOLD R1
robot aims + drives
to the spot by itself

3 📳
FEEL THE BUZZ
screen says
ON SPOT - FIRE

4 🎯
KEEP HOLDING R1
it fires when aimed
one ball at a time

5 🏁
LET GO, DRIVE OFF
go get more balls

NO BUZZ = NO SHOT. Never shoot while moving. Last 20 s (3 buzzes) → PARK!

🔧 PIT CREW: SET THE SHOT SPOT (5 min)

do this once per event – the robot remembers it

1 📍
PARK ON YOUR BEST SPOT
where shots go in
launcher facing the goal

2 ⚡
CHECK THE SPEED
camera sets it (AUTO)
→ / ← until balls land IN

3 □
HOLD □, LET GO
robot squares up
to the goal

4 💾
PRESS SHARE
buzz + screen:
SHOT SPOT saved

Test it: drive away, hold R1 → the robot comes back, buzzes and fires. Most go in? **Done!** Not good? Move a little, fix the speed, press SHARE again (it replaces the old spot). Screen says **"? - press Share again"**? That spot is from before 10 Nov night: save it again.

🛠️ FIX IT FAST

Balls land SHORT	D-pad → (+10) one press at a time
Balls go LONG	D-pad ← (−10)
Left / right misses	That's aim, not speed: R1 aims by itself (tags in view)
R1 doesn't aim	Wrong alliance? Restart TeleOp, pick ○ / ✕ in INIT
SHARE: "Can't save"	Turn the launcher toward our goal's tags
Always the same side	**BioBuzz Tune**: D-pad ← / →, SHARE saves
Balls stay in robot	**BioBuzz Tune**: D-pad ↑ = longer pause, SHARE saves
Windmill stuck	Hold ○ (unjam) 1 s, then R1 again
R1 waits: `FIRE HELD`	Aiming / driving to the spot; fires anyway after 1.5 s

📝 PRACTICE: LOG EVERY SHOT

After each ball lands: **hold L1 + D-pad** ↑ **IN** · ↓ **SHORT** · → **LONG** · ← **SIDE**
Within 10 s · **short buzz** = saved · **2 blips** = not saved · volley: in the order they flew
D-pad without L1 changes the shot speed! · INIT: **Diagnostics log ON**

📺 READ THE SCREEN

Alliance	must match your bumper colour
Shot speed	`AUTO 41 in 1445 +0` = camera picked it `MANUAL` after D-pad ↑ / ↓ → □ = AUTO again
Launcher	**READY** = ok to fire
HIVE aim	tags seen + distance to the goal
Shot spot	`now 58 in (+6)` = 6 in too far **ON SPOT - FIRE** = go!
Drive	`robot-centric` = default `FIELD-CENTRIC, intake +35 deg` = after L1 / OPTIONS hold
Balls	`12 out, results 12 (IN 9 …)` = fired / logged: should match
